

Assetic is an Australian firm providing asset investment and management products and associated implementation, training, support and maintenance services to local government and other major organisations. With a strong presence on the ground in all Australian states and parts of South-East Asia, Assetic has been widely recognised in providing Local Governments with a genuine Local Government Solution.

Asset Management Solutions

From inception, Assetic product development has been based on strong industry partnerships. Our strength in successful system implementation and integration stems from a strong background in Local and State Government asset management practice.

For Finance Managers

- Seamless asset accounting and valuations (supporting IFRS and AAS)
- Knowledge of how much it costs to provide services
- Complete audit trails of asset updates and capital works
- Funding optimisation and cross-asset trade offs – what-if style scenarios
- Budgetary analysis.

For Asset Managers

- Central asset registers for all asset classes
- Step, LG-Asset, WAAMI and LGSA, Grants Commission and Schedule 7 reporting
- Capital works programming
- Whole-of-life analysis for service level planning
- Life-cycle costing and asset failure predictions

- Managing service levels
- Reporting on KPIs.

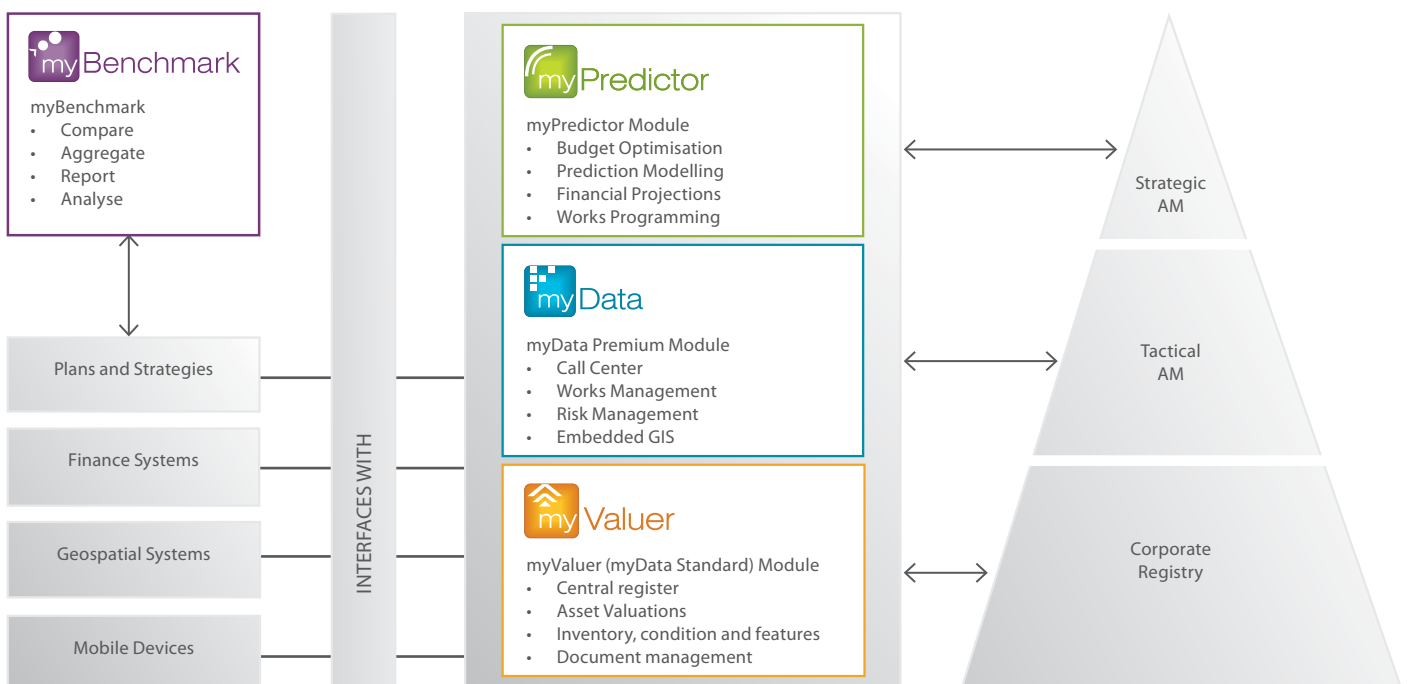

For Risk and Governance Managers

- Record and manage asset-based risk
- Prioritise projects with risk inputs
- Manage status of regulatory compliance
- Track residual risks
- Document management.

For Depot/Ground Staff

- Work orders and maintenance management
- Budget management
- Legislative compliance with insurance and risks
- Inspection planning
- Workflow planning and performance reporting.

Our software comes in three versions: Enterprise, Premium and Standard. Assetic systems are focused on Local and State Government, Ports and Defence Assets.

System Implementation

Assetic implements software through a step-by-step framework that replicates Council-specific workflow and reporting needs. We instil the principles of asset management based on the International Infrastructure Manual and the Optimised Decision Making Manual in every step of implementation. We are able to expedite implementation by providing facilitation, diagnostic and knowledge integration. Our philosophy of implementation is to make asset management a successful way of life rather than just software deployment.

Assetic System Implementation

Recognition and Awards

Our ability to deliver customised long-term projects on a needs-based relationship with our customers is strongly supported by the awards our software has been recently associated with:

- George Town Council, Tasmania – Winner of the 2006 DoTARS National Asset Management Award. Glenorchy City – Winner of the 2006 LG Focus Award.
- Awarded an Ausindustry Grant in 2007 for development of an investment modelling and benchmarking tool for Local Government sector.
- Chosen as product of choice by key presenters for CPA Master Class Programs in Asset Management in all major cities.
- Selected as a preferred supplier of Asset Management Systems to Queensland Local Government through the Local Buy procurement body.
- Assetic to provide training in asset management systems by Asia Pacific Institute of Good Asset Management (APIGAM), and Bond University's Advanced Asset Management Program at the Mirvac School of Sustainable Development.

Testimonials

"Assetic's systems were utilised for recording inspections, condition, work history and reporting on our infrastructure valuations. The implementation support enabled us to develop compliant processes for various state legislations. myPredictor assists us in producing long-term plans. myData provided full audit trails and allowed Council to re-run reports whilst maintaining previous versions. The system is flexible and can easily be used for any type of asset recording, inventory, work management, prediction and valuation. The auditors commented that the philosophy and methods embraced by Council systems were the best they had ever seen."
[Latrobe City, VIC](#)

"Our Aldermen speak strongly in favour of the Asset Management process, primarily due to the need to prevent our assets decaying further. To have Council's Aldermen looking beyond 12 months, well into the future and towards the legacy they may leave was fantastic. I have no doubt that without the proper systems and implementation support, such a change would not have been possible. In my view our ability, through Assetic's myPredictor, to clearly illustrate the consequences of underfunding our assets was the pivotal moment in this process."
[Glenorchy City, TAS](#)

"In 2003, we implemented Assetic's corporate asset management system, myData, and financial planning system, myPredictor. Having undertaken all our asset analysis, capital planning, valuations and predictions, we now believe that we are one of the leading councils with Asset Management in Australia. This has only been possible with their guidance and expertise in tutoring engineering, financial and asset rating personnel in the principles of asset management. We believe that with the continued implementation support, George Town Council will remain a leader in the area of Asset Management."
[George Town Council, TAS](#)

"I would highly recommend Assetic to any Council that wishes to improve their asset management functionality and still retain the knowledge and maintain ownership of the process. Since 2006 our road management planning has reached excellent standards and we now have very good information and predictive capability, thanks to Assetic systems. Their ability to develop information from ground up is fundamental to their success."
